

POWER INFORMED DECISIONS WITH EXODIGO'S UNDERGROUND MAPPING SERVICES

Expand grid capacity with our subsurface maps and models. Our insights enable:

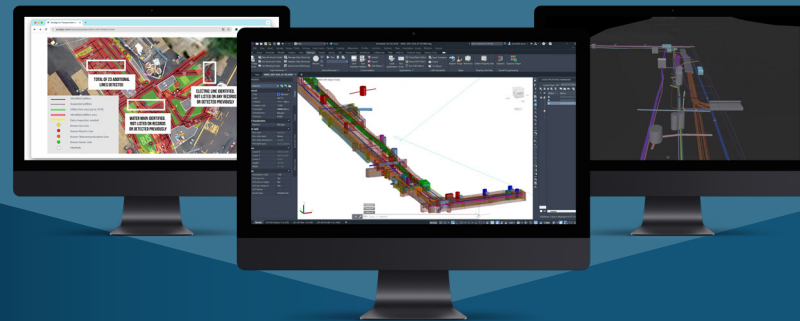

- ✓ **STRATEGIC FEASIBILITY EVALUATION:** Assess your project options with a full understanding of underground risk.
- ✓ **FINANCIAL CONFIDENCE:** Make the business case for expanded services and upgrades.
- ✓ **RESOURCE OPTIMIZATION:** Achieve budget certainty without unexpected delays, utility strikes, and millions tied up in contingency funding. Reinvest saved funds and complete more projects in a single fiscal year.

**Expedite project
delivery with
Exodigo** to achieve
grid resilience
across markets.

OUR MAPS OFFER UNDERGROUND INTELLIGENCE THAT ENABLES SAFER, MORE EFFICIENT CONSTRUCTION AND A STRONGER GRID FOR ALL

Unlike traditional locating methods, we take a completely new approach. Our platforms combine multi-sensor fusion, 3D imaging, and AI technologies to create complete, accurate maps that integrate with your systems of record.

File formats available: DWG (AutoCAD), SHP (GIS), DGN (Bentley), KML, PDF, BIM
Compatible programs include: Autodesk, ArcGIS, Google Earth, vGIS

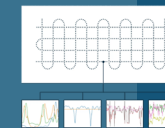

OUR PROCESS

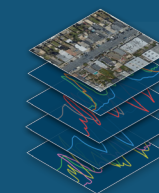

Systematic Scanning: We scan in an overlapping snake pattern to cover the area fully.

Data Acquisition: We use multiple sensors to create the most complete datasets available on the underground.

AI-Powered Map Creation: Using AI and advanced geophysics, we create maps more efficiently and accurately than any premium locator.

Multi-Sensor Fusion: By fusing data from all sensors with existing records and high-resolution imagery, we form the basis for our maps.

Our 2D maps and 3D models help you access precise underground data confidently and quickly to inform design and engineering decisions.
